Dr Sharron Phillipson and Dr Lesleigh Brown will fix frown lines.

WRINKLES occur in two ways; when the skin loses elasticity during the natural aging process and when we make repeated facial expressions, sometimes referred to as our frown lines.

Different methods of cosmetic injections are used to reduce these wrinkles and give a smoother, more youthful appearance – they are injectable muscle relaxants and injectable fillers.

Muscle relaxants use a purified protein

that relaxes the tiny facial muscles that cause expression lines.

It is a simple non-surgical procedure that smooths deep persistent facial lines by relaxing the muscles causing those lines to form. It keeps them relaxed for months.

This procedure is widely used to remove frown lines between the eyebrows, crow feet around the eyes and horizontal forehead wrinkles.

Other wrinkles are caused by the loss of

collagen and hyaluronic acid, proteins that form the framework of our skin.

Replacement therapy can replenish the skin's lost collagen, filling the lines and furrows and giving younger, softer skin.

At Elizabeth Laser clinic, the doctors are experienced in the use of all the various cosmetic injections – the effects of which last a few months to more than two years and even permanent replacement. Doctors

at the clinic will help you choose the product that is right for you.

Elizabeth Laser also offers the Paris Lip Technique, which defines the lips with a natural looking outline.

It is ideal for younger people who want a fashionable appearance or mature women seeking a natural, more youthful look.

» For more information on any of these procedures, contact the surgery and speak to one of the doctors.

Specialising in facial rejuvenation & breast surgery
